

Subspace — Product Intern Assignment

Vocallabs / Subspace | Final submission deck

What this deck contains

- 5 strongest feedbacks across GTM/ICP, Competitors, Features, UX, Collaborations
- Each: Observed → Problem → Ship Instead (with tradeoffs + priority)
- Evidence-backed: app exploration + Play Store reviews + Reddit + competitors

Proof of work

- Explored: onboarding, home, groups, join flow, checkout, wallet, gift cards, shared management
- Synthesized: trust + activation reliability as the true value prop

Screenshots

Executive Summary — Reliable access beats cheaper price

What the evidence says

- Users fear losing access more than losing money
- Activation delays + admin dependency are recurring complaints
- Support escalation (often WhatsApp/manual) is part of the current journey

So what Subspace should optimize for

- North Star: Paid → Active (verified access) reliability
- Pre-payment trust + post-payment recovery must be productized

“...waiting days for activation... admins not responding... refunds slow/unclear... support hard to reach...”

Public reviews + Reddit themes

Top 5 feedbacks (one-liners)

- P0 Access continuity: activation ETA + verification + auto-escalation
- P0 Support dependency: in-app case tracking + SLA
- P0 Trust before payment: reliability badges + failure-case disclosure
- P1 Checkout/refunds: stateful timelines + refund tracker
- P1 Marketplace quality: rank/delist low-reliability

Evidence Sources

Product Overview — Promise vs expectation gap

Subspace promise (public copy)

- Manage subscriptions, share costs, and discover new services.
- Join forces with friends... split bills... build credit strength together.

Key product tension

- Marketplace model creates post-purchase dependency on admins.
- But users evaluate Subspace like a managed service:platform guarantees access + recovery.

User expectation (from reviews)

- Fast activation (Netflix etc.)
- No logouts/crashes
- Admin responsiveness or platform takeover
- Clear refunds + easy support

PLAY STORE: review collage (activation, logout, admin, refunds, support)

GTM & ICP — Position around guaranteed activation

Primary ICP (fastest to convert)

- Value-seeking subscription buyers who prioritize reliable access
- They tolerate fees if: activation is predictable + support is visible

Secondary ICP (highest upside, highest risk)

- Friends/groups sharing subscriptions
- Key friction: awkward payment collection + admin dependency after purchase

Message test (1 line)

“Get subscriptions cheaper — with guaranteed activation and in-app support.”

Activation definition

- Success = Paid → Active + Access verified in-app
- Track Time-to-Activation (p50/p95) as a growth KPI

REDDIT: affordability motivation thread screenshot

APP: subscription status screen (activation pending)

Feedback #1 — Trust & Access Continuity (Activation + Retention)

Observed

- Users report waiting days for Netflix activation
- Fear of losing access > fear of losing money
- Post-purchase dependency on admins

Problem

- User: paid but can't use the subscription → anxiety + rage
- Business: churn + refunds + rating decline; lower repeat purchases

Ship Instead

- Activation status page with ETA (p50/p95) + proactive notifications
- Access verification step before marking “success”
- Auto-escalation: if not active in X hours → platform takes over
- Tradeoff: higher ops load; payoff: lower churn/refunds + higher trust conversion

Impact / Effort

Impact: Very high

Effort: Medium

Evidence

PLAY STORE: review screenshot (“waiting days for Netflix activation”)

Expected outcome

- ↑ paid → active success
- ↓ refunds/chargebacks
- ↑ D30 retention

Feedback #2 — Support Dependency (Trust + Recovery)

Observed

- Support repeatedly mentioned in Play Store reviews
- Users need WhatsApp/manual escalation
- Support praised only after escalation

Problem

- User: feels abandoned → scam narrative
- Business: high support cost + higher refunds + negative reviews

Ship Instead

- Help with this subscription” inside each order/subscription
- Case timeline: Open → In progress → Awaiting admin → Resolved
- On-screen SLA + auto-credit on SLA breach
- Tradeoff: SLAs create liability; payoff: predictable recovery + fewer escalations

Impact / Effort

Impact: High

Effort: Medium

Evidence

PLAY STORE: review screenshot (support hard to reach / wrong number)

APP: support entry point screenshot

Expected outcome

- ↓ time-to-resolution
- ↓ support contacts/order
- ↑ CSAT + rating

Feedback #3 — Weak Trust Signals Before Payment (Conversion)

P0

Observed

- Marketplace trust is weak before payment
- Admin responsiveness is a known failure point
- Reddit mentions scammers in shared subscriptions

Problem

- User: “who am I paying and what if it fails?”
- Business: conversion drop at join/checkout; disputes later

Ship Instead

- Admin reliability badge (activation success + response rate)
- Failure-case disclosure on join screen (activation delay, refund timeline)
- Label inventory: platform-backed vs community-backed
- Tradeoff: more info may add friction; payoff: less fear + fewer disputes

Impact / Effort

Impact: High

Effort: Medium

Evidence

REDDIT: IndiaTech screenshot (scammers/admin)

APP: shared subscription join/listing screen (your exploration)

Expected outcome

- ↑ join→checkout CVR
- ↓ disputes
- ↑ trust conversion

Feedback #4 — Checkout & Refund Transparency (Reduc anxiety)

P1

Observed

- Refunds perceived as slow/unclear
- Operational problems > pricing problems in reviews
- Users often need manual escalation

Problem

- User: uncertainty triggers repeated support pings + churn
- Business: chargebacks + support load + trust erosion

Ship Instead

- Checkout shows activation ETA + refund eligibility + where money sits
- Post-payment “What happens next” timeline
- Refund tracker with timestamps + expected completion date
- Tradeoff: timelines expose reality; payoff: predictability + lower rage

Impact / Effort

Impact: Med–High

Effort: Medium

Evidence

checkout summary screen

PLAY STORE: review screenshot (refund delay/unclear)

Expected outcome

- ↓ chargebacks
- ↓ refund contacts
- ↑ checkout completion

Feedback #5 — Marketplace Quality Ranking (Scale safely)

P1

Observed

- Admin responsiveness is a major failure point
- Users dependent on admins after purchase
- Quality variance drives inconsistent outcomes

Problem

- User: feels like luck; trust collapses after one bad case
- Business: scaling capped by variance; ratings and churn worsen

Ship Instead

- Rank admins/groups by activation success + response SLA + dispute rate
- Auto-delist / throttle low-quality admins
- Incentives: visibility + lower fees for high performers
- Tradeoff: reduces supply short-term; payoff: long-term trust + retention

Impact / Effort

Impact: High

Effort: Med–High

Evidence

APP: groups discovery screen

PLAY STORE: review screenshot (admin not responding)

Expected outcome

- ↓ activation failures
- ↓ disputes
- ↑ repeat purchases

Competitor Analysis — What they sell vs what users fear

Comparison (positioning + trust primitives)

Area	Subspace	Spliit	PremiumAtCheap
Core promise	Broad: manage/share subscriptions + collaborative finance copy	“Safely and securely” co-subscription	Discount store + warranty + fast support
Trust primitive	Needs explicit guarantee + case tracking	Safety-first framing	Warranty + human chat support
What fear they address	Access failure + no accountability	Unsafe sharing	Access failure + refunds
What Subspace should copy	Guarantee + activation status + SLA	Lead with safety	Warranty language + fast support

COMPETITOR: Spliit hero (“safely and securely”)

COMPETITOR: PremiumAtCheap warranty + support

SUBSPACE: website hero copy

SWOT (execution-focused)

Strengths

- Clear demand for cheaper subscriptions
- Support can delight once escalated
- Public security posture exists (VDP + trust content)

Weaknesses

- Activation delays + access continuity issues
- Admin dependency after purchase
- Refund/support friction; bugs/logouts

Opportunities

- Compete on reliability: Guarantee + case tracking
- Marketplace quality ranking to scale safely
- Trust-lending + bundle partnerships

Threats

- Alternatives with warranty/support capture trust
- Scam narratives spread quickly on Reddit
- Chargebacks/refunds can kill unit economics

Impact vs Effort Roadmap (90 days)

0–30 days (P0): stop the bleeding

- Activation status + ETA + proactive updates
- In-app case tracking + SLA
- Fix crashes/logouts + performance

31–60 days: build trust at checkout

- Pre-payment trust badges + failure-case disclosure
- Refund tracker + “what happens next” timeline

61–90 days: scale marketplace safely

- Marketplace quality ranking + enforcement
- Pilot trust-lending + bundle partnerships

Impact vs Effort

Final Recommendation

One-line recommendation

Make Subspace the reliable access layer for subscriptions — guarantee activation + recovery, then scale the marketplace.

What this unlocks

- Higher activation (paid→active)
- Higher retention (fewer failures)
- Lower support cost (less WhatsApp)
- Stronger moat (trust + reliability)

How I'd measure success

- Time-to-Activation (p50/p95)
- Paid→Active success rate
- Time-to-Resolution + CSAT
- Refund rate + chargeback rate
- App rating trend
